

Introduction

- This PowerPoint file contains 35 of the more important graphs shown on The Equality Trust website at www.equalitytrust.org.uk
- The graphs are also published in the book by Richard Wilkinson and Kate Pickett, *The Spirit Level: Why Equality is Better for Everyone* (Penguin, 2010).
- We hope you will use them in talks, lectures or discussion groups to help increase people's understanding of the effects of inequality.
- These slides are provided on condition that you acknowledge their source.
- We strongly recommend that you use them in conjunction with the book, which explains the relationships shown in the graphs.

Donations

The Equality Trust is working hard to build a better society, by gaining a wider public understanding of the damaging effects of large inequalities of income and wealth. Together we can build support for policies to reduce them.

As these slides represent many years of work and thought, we would be very grateful for donations to help The Equality Trust continue its work.

As an independent, not-for-profit organisation, our work depends on generous donations from individuals and trusts which share our vision.

You can donate in two ways:

- Use PayPal to donate online at www.equalitytrust.org.uk
- Send a cheque payable to **The Equality Trust, 32-36 Loman Street, London SE1 0EH, UK**

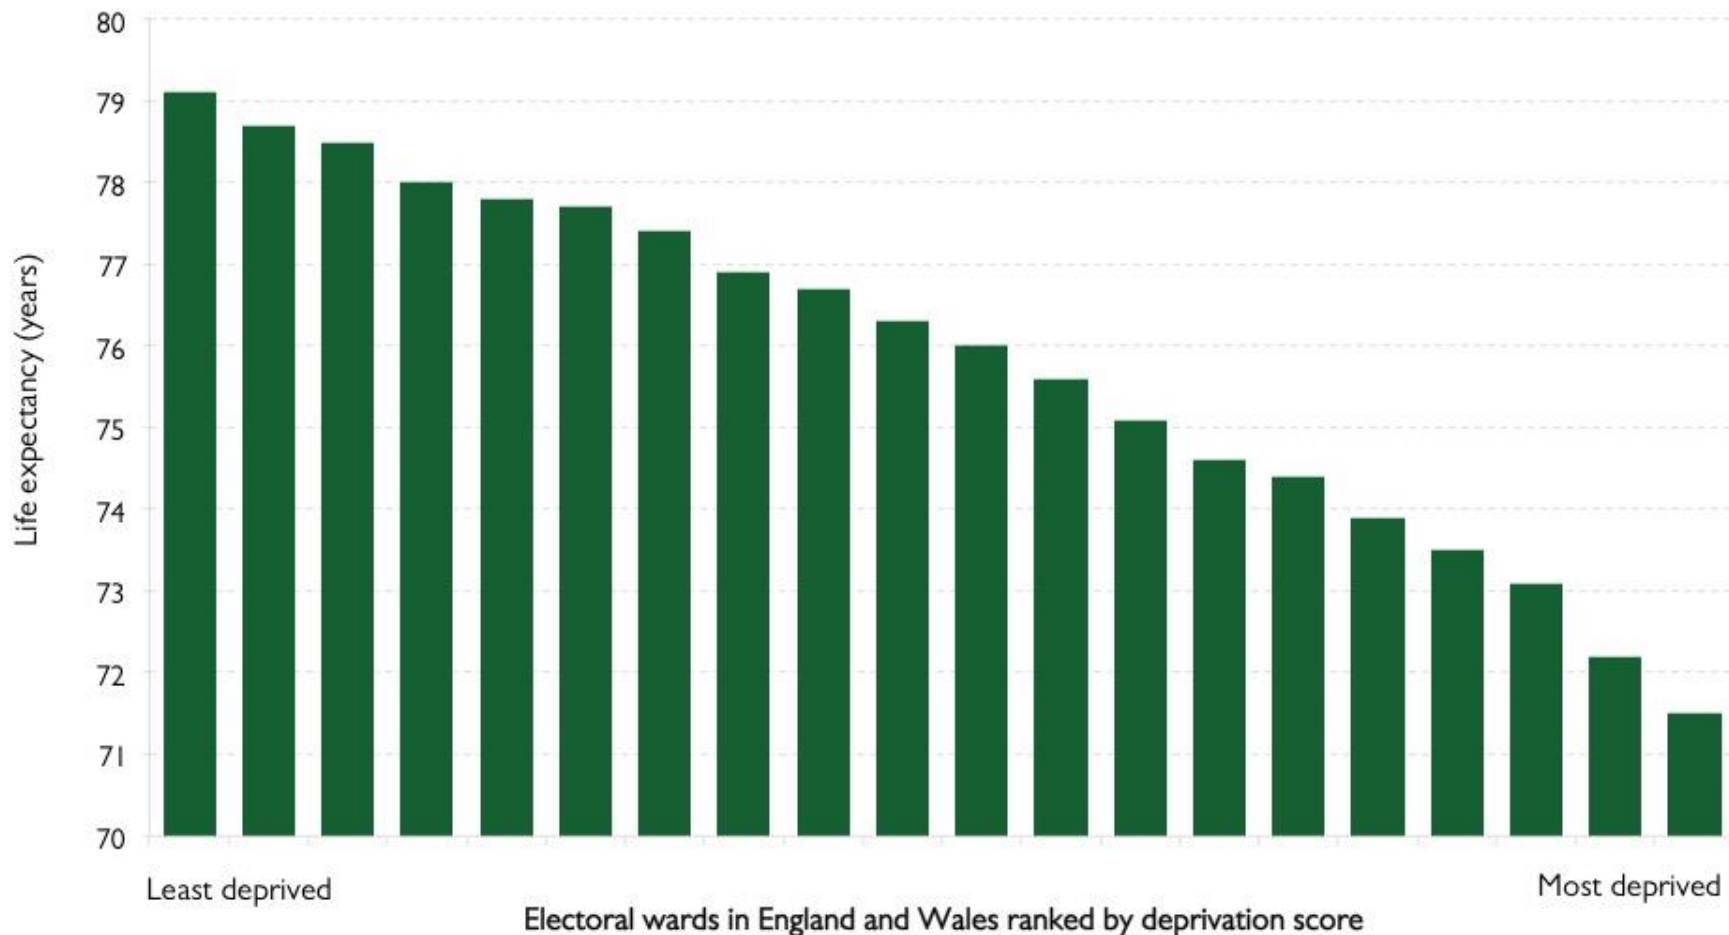

Health is related to income differences *within* rich societies but not to those *between* them

Between (rich) societies

Health is related to income differences *within* rich societies but not to those *between* them

Within societies

How much richer are the richest 20% than the poorest 20%?

Health and social problems are worse in more unequal countries

Health and social problems are not related to average income in rich countries

Health and social problems are worse in more unequal US states

Health and social problems are only weakly related to average income in US states

Source: Wilkinson & Pickett, *The Spirit Level* (2009)

Child wellbeing is better in more equal rich countries

Child wellbeing is unrelated to average incomes in rich countries

Levels of trust are higher in more equal rich countries

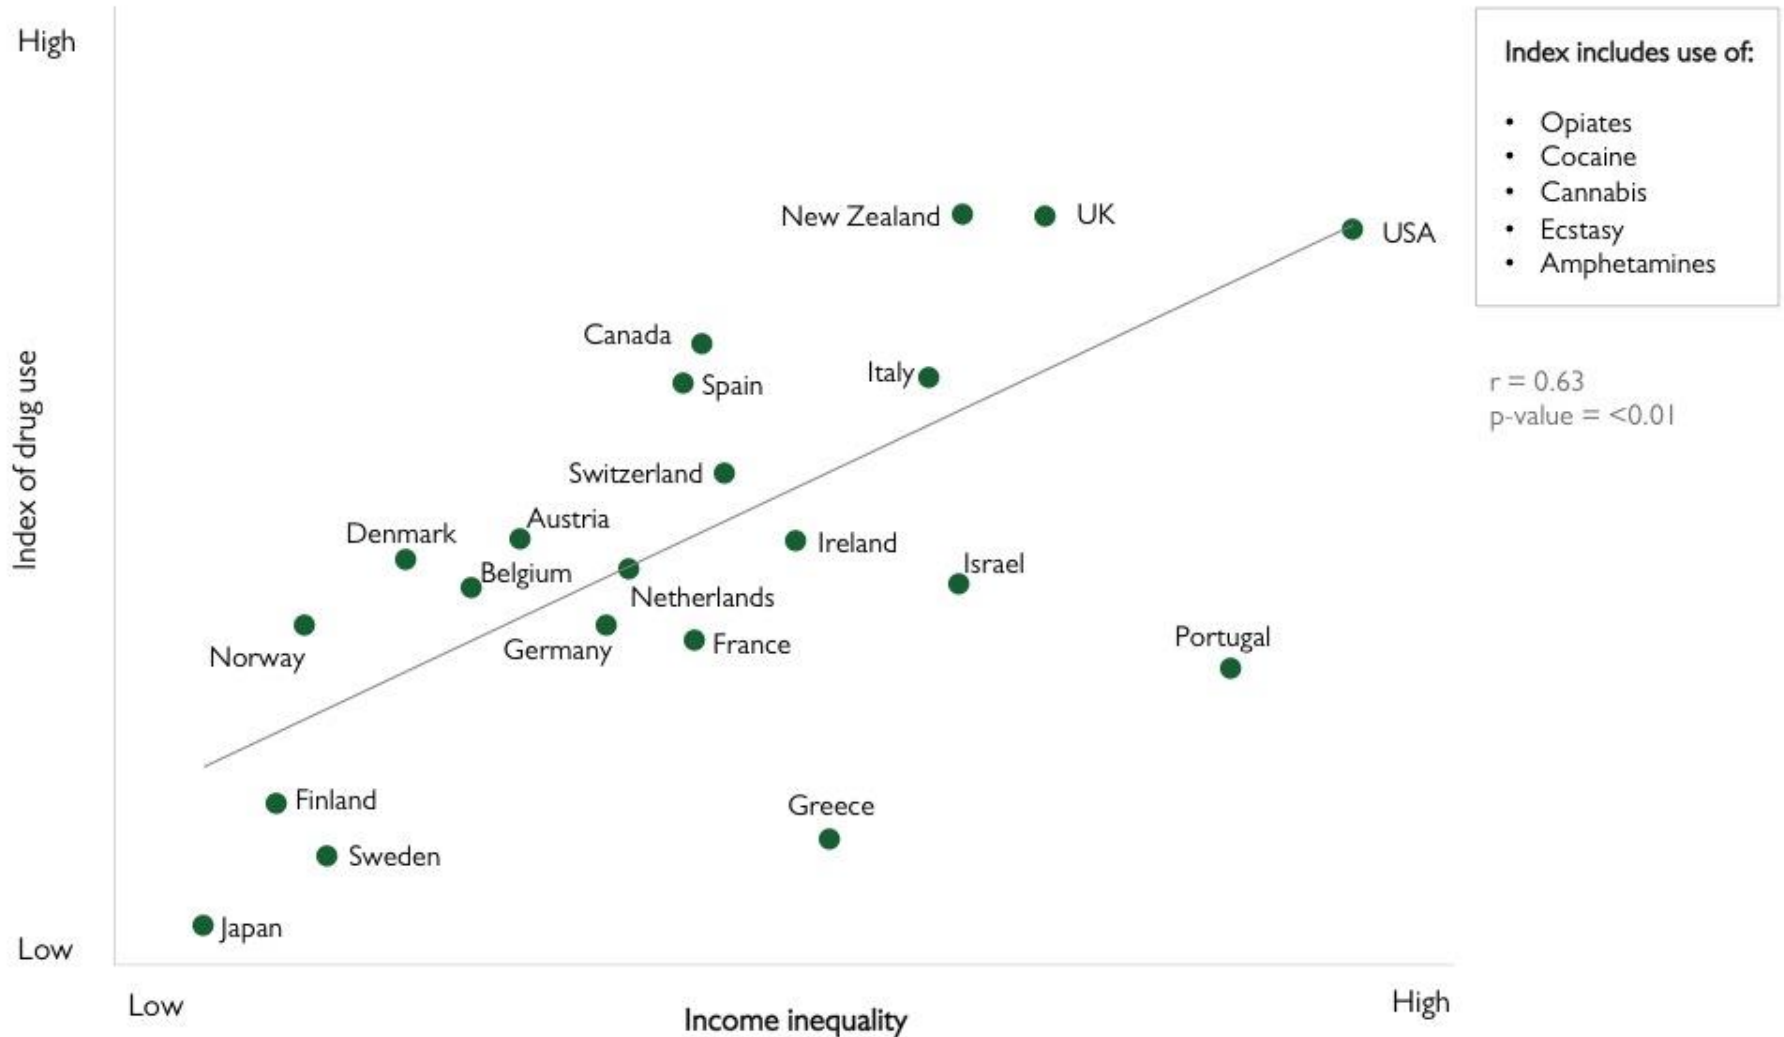

Levels of trust are higher in more equal US states

The prevalence of mental illness is higher in more unequal rich countries

Drug use is more common in more unequal countries

Life expectancy is longer in more equal rich countries

Infant mortality rates are higher in more unequal countries

More adults are obese in more unequal rich countries

Educational scores are higher in more equal rich countries

More children drop out of high school in more unequal US states

Source: Wilkinson & Pickett, *The Spirit Level* (2009)

Teenage birth rates are higher in more unequal rich countries

Teen pregnancy rates are higher in more unequal US states

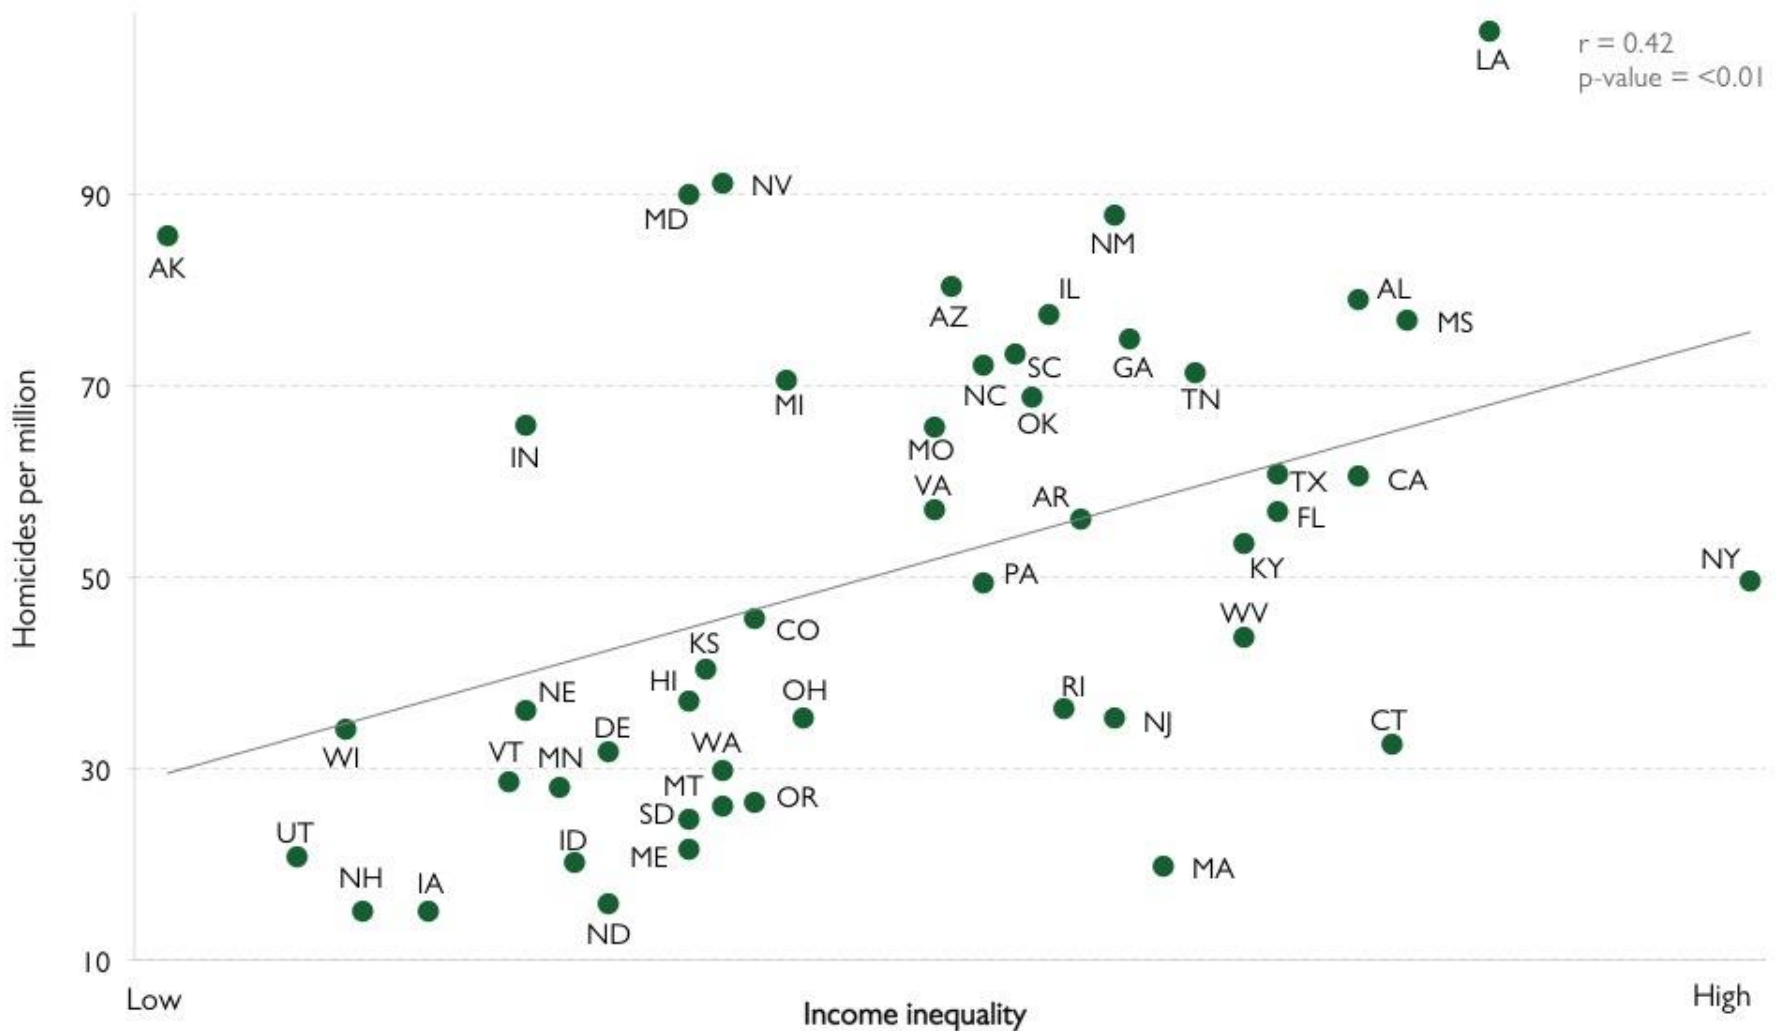

Homicide rates are higher in more unequal rich countries

Source: Wilkinson & Pickett, *The Spirit Level* (2009)

Homicide rates are higher in more unequal US states

Children experience more conflict in more unequal societies

Rates of imprisonment are higher in more unequal countries

Rates of imprisonment are higher in more unequal US states

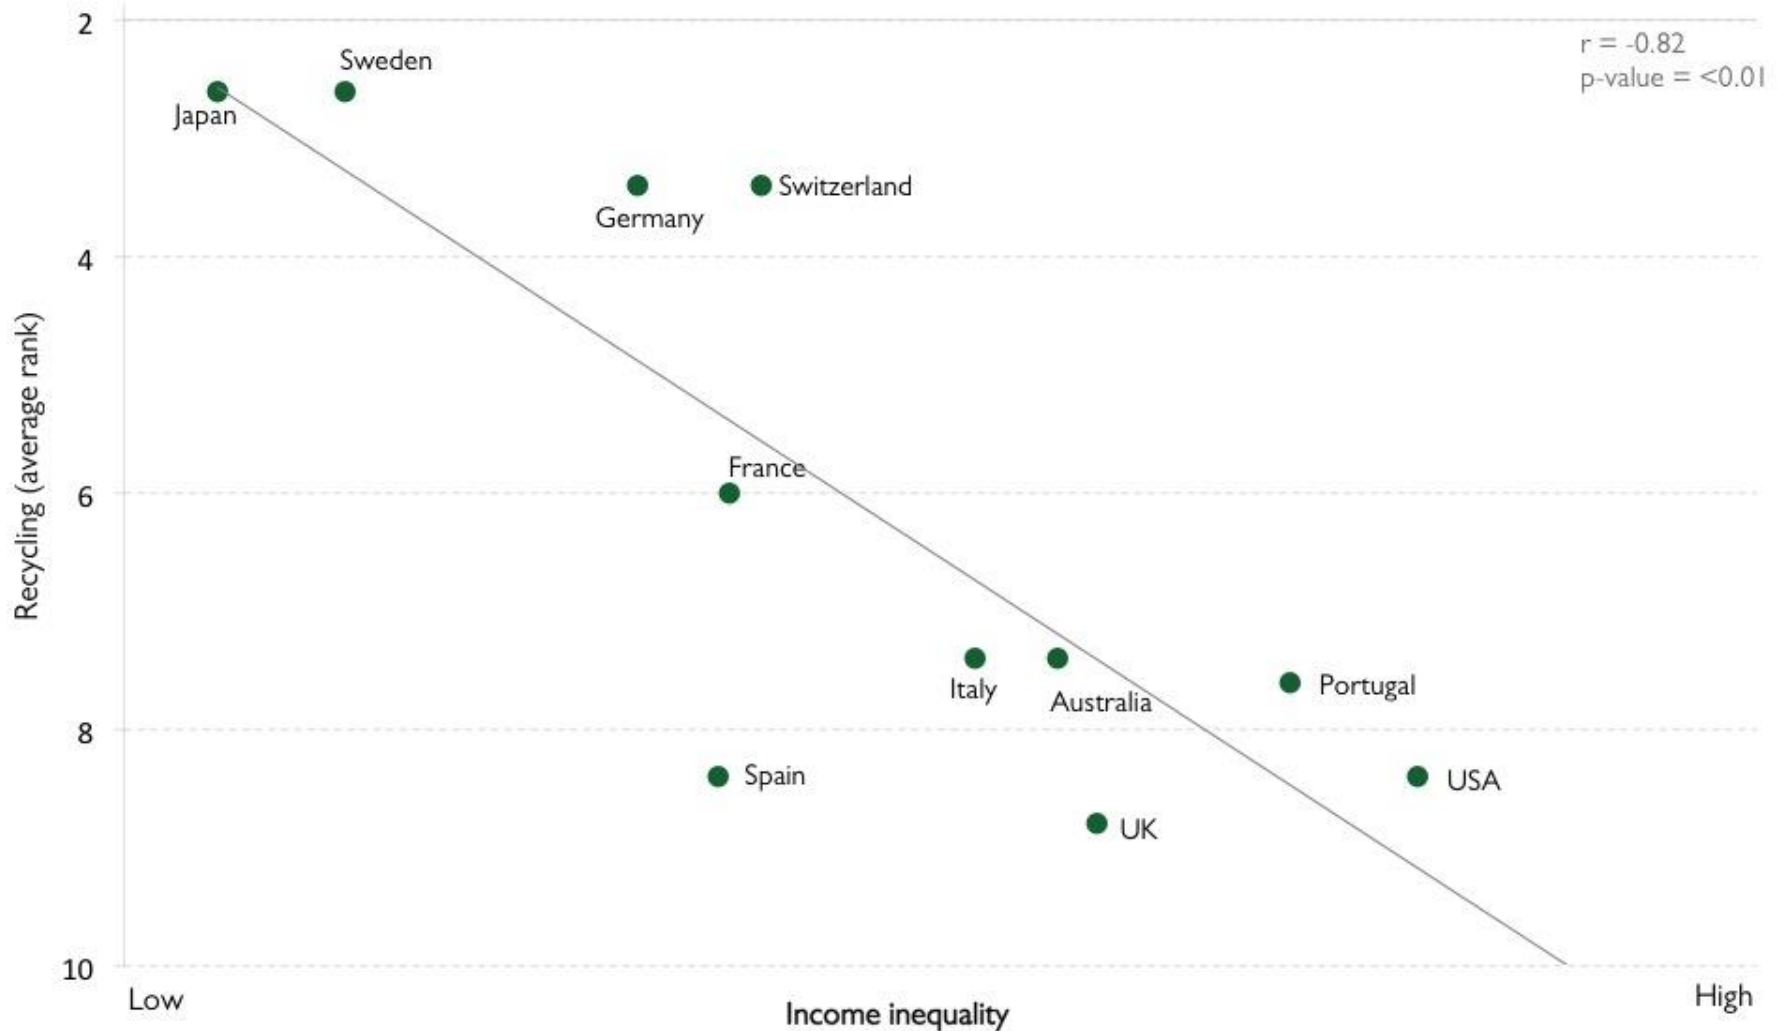

Social mobility is lower in more unequal countries

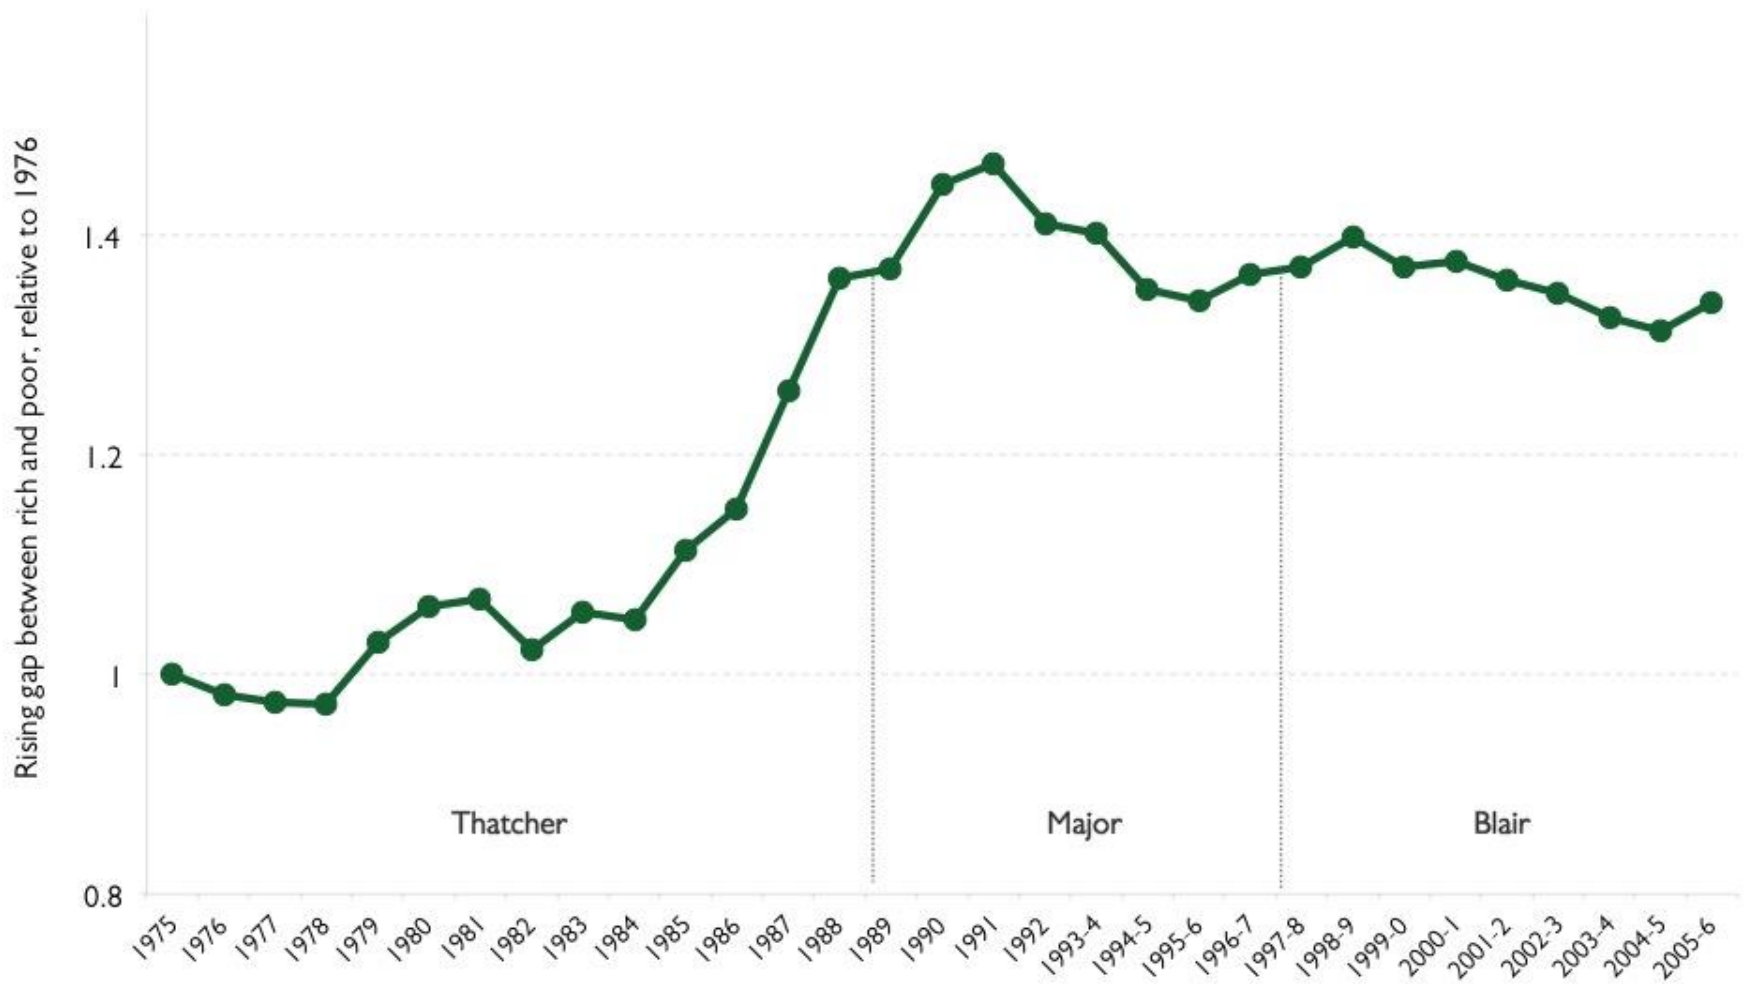

Overdeveloped countries? High life expectancy can be achieved with low CO₂ emissions

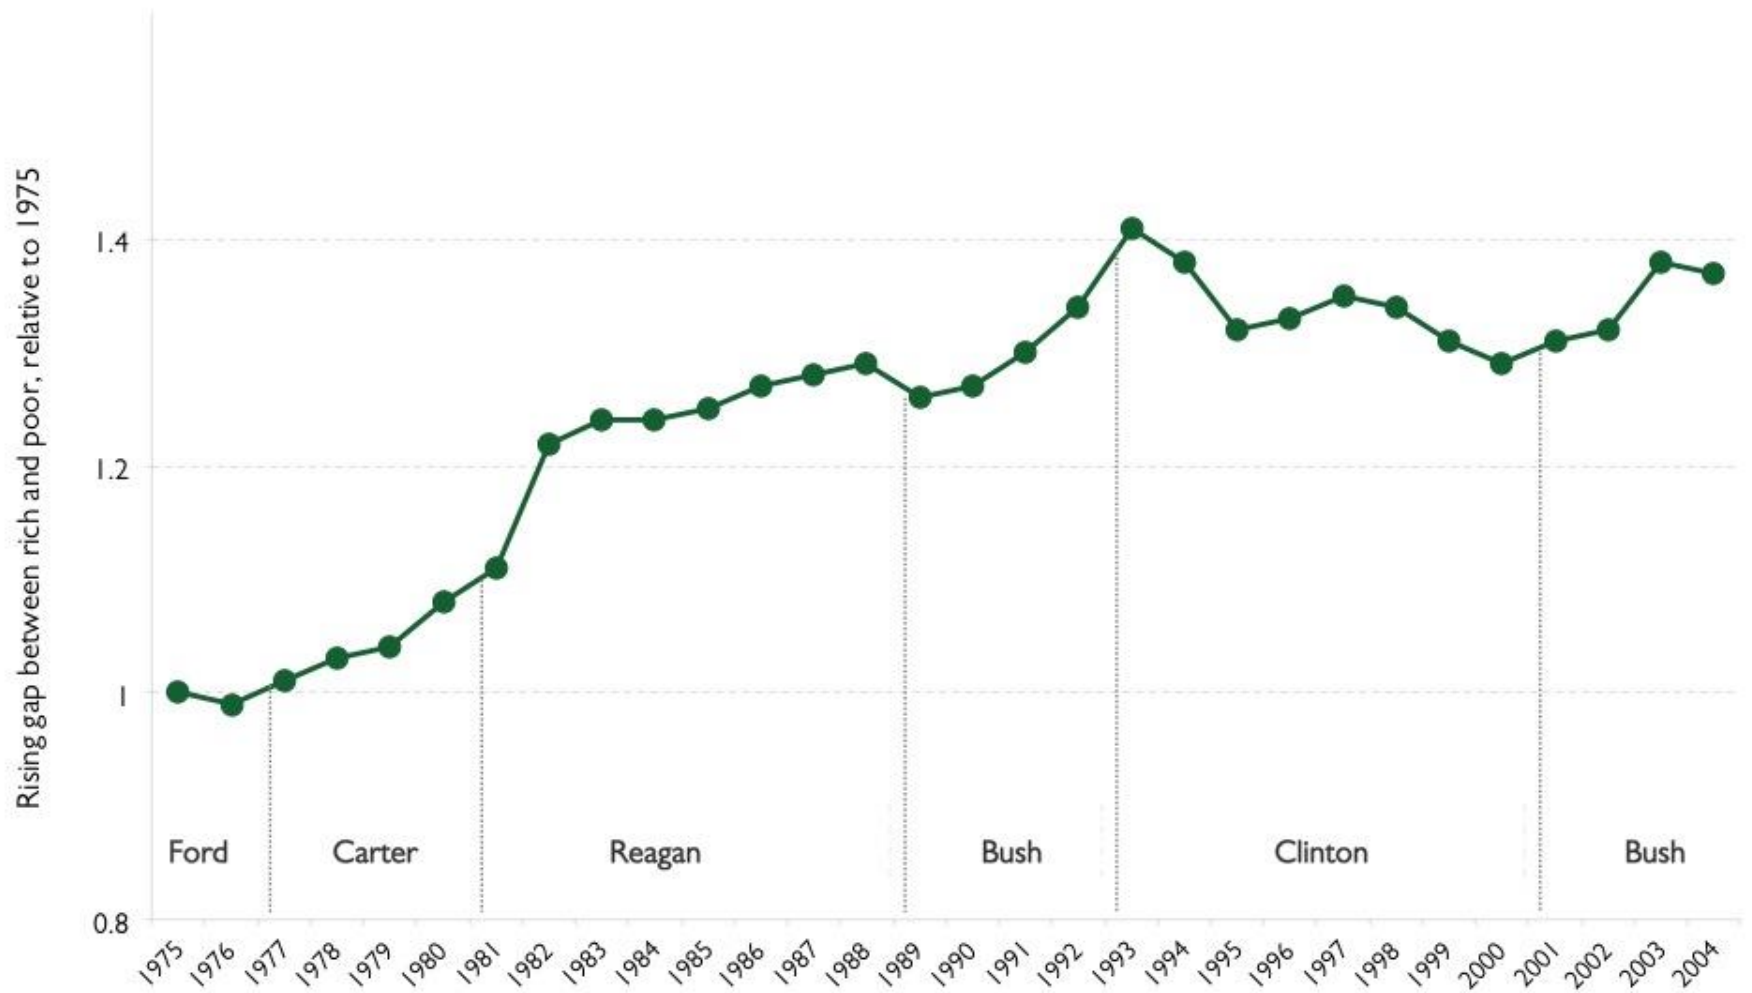

More equal countries rank better (1 is best) on recycling

Trends in UK income inequality 1979 – 2005/06

Trends in US income inequality 1975 – 2005

The rich developed societies have reached a turning point in human history.

Politics should now be about the quality of social relations and how we can develop harmonious and sustainable societies.
